PROFESSIONAL SUMMARY

Software Engineering student with hands-on experience in backend and systems development using C++, Java, and Spring Boot. Built projects including search engines, compilers, and simulation systems with a focus on performance and system design. Seeking opportunities to contribute to scalable software systems.

EDUCATION

Bachelor of Software Engineering, National University of Sciences & Technology 2024 – 2028

GPA: 3.54 / 4.00

Relevant Coursework Data Structures and Algorithms, Object-Oriented Programming, Discrete Mathematics, Linear Algebra, Database Systems, Operating Systems

SKILLS

Programming Languages	Java, C/C++, GO, Javascript, SQL
Framework and Technologies	React, Spring Boot, JavaFX, Swing
Tools & Platforms	Git, Linux, Vercel, Maven, Oracle VM, AGI STK

EXPERIENCE

Backend Developer May 2025 – Present
c2o (CabCall Outsource) *[247 Plaza, Block C, Soan Gardens, Islamabad, Pakistan]*
Developing and maintaining backend services for outsourcing and dispatch systems. Building scalable APIs and contributing to system architecture and database optimization.

Chinese SBAS Internship September 2025 – November 2025
.
[NASTP Alpha Tower, Islamabad, Pakistan]
Contributed to software development for a Chinese SBAS project. Supported system-level tasks related to satellite navigation and positioning.

Teaching Intern June 2025 – August 2025
.
[Explore Valley Schools Pakpattan, Pakistan]
Assisted students with programming fundamentals. Helped debug code and supported technical learning sessions.

PROJECTS

CubeSat Remote Sensing Mission Simulation (APSCO CubeSat Competition)
Simulated CubeSat mission for glacier imaging using AGI STK. Configured sensors, performed coverage analysis, and contributed to ground station development using Yamcs. [Demo](#)
Technologies: AGI STK, Remote Sensing, CubeSat Systems

Arxiv Search Engine Stellar Trace
Search engine using Arxiv metadata with a C++ ranking backend and React frontend with a 3D Three.js interface.
[Demo](#) — [FrontEnd](#) — [BackEnd](#) — [Live](#)
Technologies: C++, React, Three.js

RideFlow Operations Hub
Ride management system with Spring Boot, React, and Rust blockchain logging. Features JWT auth, role-based dashboards, and real-time tracking with PostgreSQL. [Live](#) — [FrontEnd](#) — [BackEnd](#) — [BlockChain](#)
Technologies: Spring Boot, React, Rust, PostgreSQL

ACHIEVEMENTS

Global Nominee (**NASA** Space Apps Challenge) Participation (**Harvard** Health Hackathon) Community Service Internship (Alkhidmat Foundation)
